

H. Pylori BUSTER

H. Pylori Buster is a postbiotic dietary supplement designed to support the body's natural processes for elimination. It contains patented *Lactobacillus reuteri* DSM17648, which can attract specific organisms in the intestine and support their removal via the digestive tract. This unique strain of L. reuteri may specifically support H. pylori detoxification properties in the stomach and maintain overall digestive health. **

Key Benefits & Features

- Supports the microbiome**
- Maintains H. pylori levels already within the normal range**
- Supports the body's process of elimination**
- Maintains gut microbial balance**
- Stable under gastric conditions and at room temperature**
- Safe for long-term daily use**

Innovative Support from a Groundbreaking Postbiotic

Helicobacter pylori (H. pylori) is a gram-negative, spiral-shaped bacterium native to the human gastrointestinal (GI) tract. It has an affinity for the acidic environment of the gastric mucosa. It's estimated that up to 50% of the world's population carries H. pylori in their GI tracts. H. pylori is spread through direct contact with individuals or household pets through saliva, feces, or contaminated food or water.

Humanity's relationship with H. pylori is ambiguous. H. pylori can have a commensal or symbiotic relationship with its human host. H. pylori is difficult to eradicate. It clings to the intestinal lining. It also uses an enzyme to produce ammonia, which creates a friendly environment in which it can thrive. Powerful gut-disrupting practices or practices that reduce stomach acid are often used to combat H. pylori, yet they can produce unwanted effects. Plus, using such approaches increases the risk of bacterial resistance.

H. Pylori Buster represents a groundbreaking and novel approach to supporting digestive health. The main ingredient in H. Pylori Buster is *Lactobacillus reuteri* DSM17648. In a study comparing over 700 species of *Lactobacillus*, the DSM17648 strain was found to support sticking to, aggregating, and facilitating the excretion of various *H. pylori* species. H. Pylori Buster is a postbiotic that contains only inactivated organisms that do not disrupt other commensal gut flora. The revolutionary development of this novel postbiotic product, which works WITH the microbiome instead of against it, can't be overstated.

Plus, H. Pylori Buster pairs perfectly with other products in the MD Custom Rx product portfolio. Consult with our team to learn more about which additional products support and help maintain healthy *H. pylori* levels.

Capsules

SUPPLEMENT FACTS

Serving Size 1 Capsule
Servings Per Container 30

Amount Per Serving	% Daily Value
<i>Limosilactobacillus reuteri</i> DSM 17648	200 mg † 20 Billion Cells

† Daily values not established.

OTHER INGREDIENTS: Nutriose® (corn dextrin), natural flavors, vegetarian capsule (cellulose, water), acacia fiber.

SUGGESTED USE: Ages 9+: Open 1 capsule into 8 oz of water and drink once daily on an empty stomach. Children under the age of 9, please consult your healthcare practitioner.

Pylopass™ is a trademark of Novozymes A/S, Denmark.

Lactobacillus reuteri DSM17648:

^ This was shown in a proof-of-concept, single-blinded, randomized, placebo-controlled pilot study to significantly support a reduced load of *H. pylori* in healthy yet infected adults. Reducing the amount of *H. pylori* in the stomach by this selective bacterial-to-bacterial cell support may be an innovative and effective maintenance practice.**
