

Advanced PushCatch® Programs for Environmental, Microbes, Mold, & Metals

Toxin exposure is one of the greatest challenges facing patients today. From pesticides and plastics to mold, microbes, and heavy metals, these burdens disrupt biochemistry, drive inflammation, and degrade quality of life. Practitioners need solutions that are science-driven, effective, and easy to implement in practice.

Dr. Christopher Shade and Quicksilver Scientific is proud to introduce the latest **Advanced PushCatch® Detox Programs**—four targeted protocols designed to address the most common toxin challenges: ENVRMNTL, MICROBES, MOLD, and METALS.

ADVANCED PUSHCATCH® DETOX SYSTEM ENVRMNTL

Advanced PushCatch® Detox System ENVRMNTL delivers comprehensive, system-wide support for clearing accumulated environmental toxins and restoring resilience. In today's world, continual exposure to pollutants can overwhelm the body's natural detoxification pathways, stressing vital organs and depleting vitality. Built on Quicksilver's patented two-step PushCatch® method—featuring Liver Sauce® to “push” toxins from cells and Ultra Binder® to “catch” and eliminate them—this advanced protocol combines powerful nutraceuticals to promote efficient toxin clearance, strengthen detox capacity, and support long-term whole-body wellness.

ADVANCED PUSHCATCH® DETOX SYSTEM MICROBES

Advanced PushCatch® Detox System MICROBES offers comprehensive support for reducing microbial load and restoring immune and gut balance. Hidden microbial stressors—such as parasites, fungi, yeast, and viruses—can drive inflammation, fatigue, and immune dysregulation while hindering detoxification. This structured protocol helps disrupt biofilms, eliminate microbial debris, and enhance natural detox pathways using Quicksilver's science-based approach. By addressing microbial imbalances early, practitioners can help patients' clear obstacles to detoxification, strengthen immune defenses, and restore the body's natural vitality and resilience.

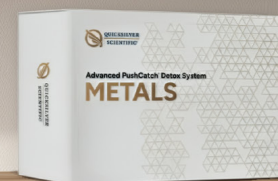

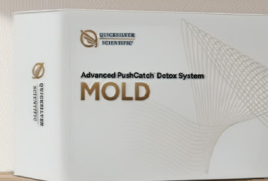

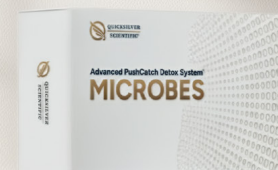

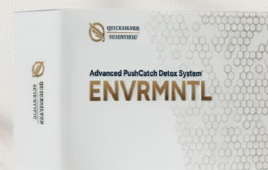

ADVANCED PUSHCATCH® DETOX SYSTEM MOLD

Advanced PushCatch® Detox System MOLD provides targeted, system-wide support for patients affected by mold exposure and mycotoxin-related health challenges. Mold toxins can overwhelm natural detoxification pathways, impacting energy, cognition, immunity, and overall vitality. Built on Quicksilver's patented two-step PushCatch® method, this protocol pairs Liver Sauce® to “push” toxins from cells and tissues with Ultra Binder® to “catch” and eliminate them. Enhanced with a specialized blend of botanicals and nutraceuticals, it offers practitioners a comprehensive, science-based approach to help restore balance and resilience in mold-affected individuals.

ADVANCED PUSHCATCH® DETOX SYSTEM METALS

Advanced PushCatch® Detox System METALS provides comprehensive support for the elimination of heavy metals and the restoration of cellular health. Heavy metals such as lead, mercury, cadmium, and arsenic can accumulate in the body over time, disrupting energy and resilience. This advanced, two-step protocol features Liver Sauce® to “push” stored toxins from cells and tissues and Ultra Binder® to “catch” and bind them for safe removal. Together, they promote antioxidant protection, cellular membrane integrity, mineral balance, and optimal detoxification capacity—offering practitioners a complete, science-driven solution for heavy metal clearance and recovery.
